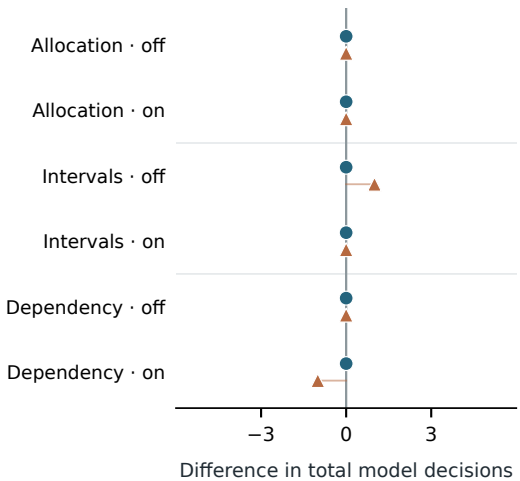
Cells: terminal code; controller / worker model decisions.
D = autonomous delivery

(c) Unified − separate

Valid pairs: S 6/6; H 6/6



(d) Ledger on − off

Valid pairs: S 6/6; H 6/6

Paired workload = controller + worker decisions; positive means more in the first condition.
Three task families per paper; one episode per cell. No population CI or significance test.
Single session is a task-solvability reference, not an isolated topology effect.
